

Video Guides

For those of you who prefer a visual guide, I've devised the following video tutorial to walk you through the process of installing Ubuntu Linux on your home PC. It assumes that you already have Microsoft Windows pre-installed, so it shows you how to re-partition your hard disk to put Linux on it. Note that although the version is 14.04 LTS, the steps are practically identical for any modern version of Ubuntu or Linux Mint.

Part 1 of 2 (Guides you how to download and install the Ubuntu 14.04.1 LTS iso image and make it bootable on a USB stick). It uses the Universal Boot Installer, which while is still available, i'd recommend using the above BalenaEtcher tool for ease of use. [<https://youtu.be/Zz7rpuAmbCo>]

Part 2 of 2 (now you have set your PC up to boot from USB and set up the USB stick, it's time to boot the Ubuntu Linux installer from that USB stick!):[<https://youtu.be/jWnMTvcoK5o>]
