

Watching and Recording TV in Linux

With Linux, you can literally turn an old PC into a Linux style Sky Plus/Tivo box, all you need is a TV card and a big enough hard drive to record all your binge watching of Game of Thrones!

MythTV

MythTV is open source software that turns your PC into a PVR (Personal Video Recorder). It enables the user to pause live TV, Skip ads, use an electronic program guide, set recordings to record whole series of a particular program, edit recording schedules, organise and view your home photo and videocamera collections as well as listening to music and record content from the Internet, it excels at many points, making it a cut above the current offerings from Microsoft (Media Centre) and PowerCinema.

Also check out [MythBuntu](#), which is an Ubuntu based pre-packaged distribution of MythTV, making it easy to install on a PC.

If you only want to do the basics, you can record and watch live TV then you don't need to use something as feature-laden as MythTV. Popular titles for viewing and recording TV are tvtime and xawtv.

The Hauppauge series of TV cards seems to work best with the Linux TV software as it is the most popular range, and best supported through the video4linux driver.
